

For Immediate Release

A Universal DBF Tool for Developers Gets a Long-Awaited Update

HiBase Group releases DBF Viewer 2000 version 6.45. A long-awaited update features a lot of improvements. The support for SDF files allows importing of fixed-column text files, enhanced DBF-to-Excel conversion became faster, and a number of interface improvements make the work with the program even easier.

Universal tools are always in demand. A one-stop solution for many similar tasks is obviously a blessing, as long as the tool works flawlessly and successfully solves user's problems. DBF Viewer 2000 is one such tool designed specially for database developers and administrators. As the name suggests, the program is for managing DBF files, but that's merely a tip of the iceberg.

DBF Viewer 2000 allows for editing, creating, manipulating and converting of the DBF databases. In particular, the conversion is possible to and from nearly 30 other file formats including XML, XLS, HTML and SQL. And the latest version 6.45 adds just one more format to the collection. The data from SDF files can now be imported to the program as well.

Moreover, exporting DBF files to the Excel XLS/XLSX format has been improved too delivering better performance and accuracy. Needless to say, DBF Viewer 2000 supports all Excel document versions and does not require Excel itself for the conversion.

Finally, the version 6.45 features a bunch of fixes and GUI improvements. For instance, the Replace command can now append a string to the data sought. Also, deleting records is now easier with the Del key, and the command line processing received a fix to a quote symbol issue.

Overall, DBF Viewer 2000 can be recommended as an affordable and functional tool to process databases in the DBF format.

Pricing and availability

DBF Viewer 2000 is available for Windows XP/Vista/7/8 and 10, in both 32- and 64-bit editions. The license costs range from \$49.95 for a personal license to \$999.95 for a worldwide unlimited license.

About

HiBase Group Company develops a number of utilities for all-around data processing and format conversion. The flagship product of the company is DBF Viewer 2000. Other titles include DBF Recovery, CSV Converter, XLS Converter and DBF Converter.
